

IRISnGEN MapViewer

Instantly Visualize Site and Customer Status

MapViewer replaces the Geographic Viewer used on prior versions of IRISnGEN. MapViewer uses embedded Microsoft® MapPoint functions to precisely pinpoint all IRISnGEN customer locations and to reflect alarm and status conditions for each site. Point-and-click drill-down functionality provides immediate access to details on important data, whether it is an alarm message from a failing system or the street level map and directions required for the technician to navigate to the customer site. Color coded icons indicate the general status of a site and right mouse functions produce a “balloon” summary depicting specific conditions at the site. A double-click opens the IRISnGEN Alarm Detail screen providing full description of the reported alarms. If multiple sites are located closely together, MapViewer presents a list of the sites from which to choose. User-selected color codes and icons allow extensive customization of the map

MapViewer uses the integrated mapping facilities of Microsoft MapPoint to illustrate the geographic location and detailed data on reported alarms. A simple mouse click can produce other pertinent data such as street and highway information, driving directions or distance to the site. While MapViewer shares some functional commonality with the Geographic Viewer, this module offers significant advantages by including the features of Microsoft MapPoint.

Major features of MapViewer include:

- Accurate multi-colored map displays in five selectable formats including a flat map world view
- Automatic site positioning based on street address
- Single click to view an alarm summary for a site
- Double click to view alarm details
- Drill-down to street level detail for North America and Europe
- Point-to-point routing and directions
- Find addresses and places
- User selected symbols and icons
- Five different map styles
- Drawing tools and map annotation
- Page setup and printing
- Full clipboard support

MapViewer is an optional IRISnGEN software module under license key control and requires a properly licensed copy of Microsoft MapPoint installed on each client PC. Customers may purchase Microsoft MapPoint from MedTel Services or other authorized resellers.
